

## Market Surveillance Action for Tyres 2015

@MSTyr15

A pan-European H2020 programme.

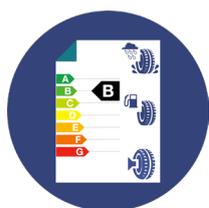

15 Market Surveillance Authorities from  
BE, BG, DE, EE, ES, FI, HR, IE, LT, LU, LV,  
PL, RO, SE, TU.

28 months, started April 2016.

The Market Surveillance Action for Tyres 2015 (MSTyr15) is a PROSAFE coordinated programme targeting C1 passenger car tyres for normal and extreme weather conditions. The main objective of this project is to help deliver the intended economic and environment benefits of the labelling of tyres with respect to improving fuel efficiency and other essential parameters by increasing the rates of compliance with the regulatory requirements.

## Market Surveillance Authorities have...

... checked 11.899 tyres labels.  
In more than 500 cases, the label  
was not compliant, not visible, or  
not available.

... reviewed 761 technical  
documentations.

... carried out laboratory tests  
for wet grip and rolling resistance  
of 134 different types of tyres.  
First analysis shows that more  
than 85% of the tyres tested were  
compliant.

### Stronger enforcement of the EU legislation

MSTyr15 intends to harmonise the enforcement measures taken by the Member States, and consequently, to increase market confidence, ensure safer road conditions, and improve consumer trust.

### Good Practice Guidelines

The participating authorities of MSTyr15 have set up Good Practice Guidelines, common procedures for exchanging information, trainings for the inspectors and national workshops.

### Data Collection

Data collection has been synchronized with a customized database in order to make information immediately available in all participating countries and to avoid double sampling.

### Energy Efficiency

The MSTyr15 Action intends to help the European Union to reach its EU emission reduction targets by 2021. By reaching a higher compliance rate, MSTyr15 is indeed expected to deliver annual savings of 105 GWh.

#### Disclaimer

This presentation arises from MSTyr15, which received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 696124.

The presentation reflects only the views of the author. The Executive Agency for Small and Medium Enterprises cannot be held responsible for any use, which may be made of the information contained therein.

The above results are based on samples of products from the markets in the participating countries. As in any routine market surveillance activity, the results represent the targeted efforts that authorities undertake to identify unsafe products. They do not give a statistically valid picture of the situation of the whole market.

PROSAFE is a non-profit organisation that brings together market surveillance officers from all over Europe and across the world.
